

# QuikDesign™ for Office 2007 Design Service

## The Challenge

Considering an upgrade to Microsoft Office 2007, but don't understand the new features, benefits and capabilities? Do you need to understand more about Microsoft's SharePoint products and collaborative tools?

Are you drowning in paper forms you want to automate, and spreadsheets you need to better share and control? Do you need better ways for your mobile and geographically dispersed users to work together?

QTS is a leading network integrator serving NJ/NY businesses for over 10 years, with strategic relationships with Microsoft, Cisco, Symantec, Citrix, HP and other partners. QTS specializes in Security, Network Management and High Availability solutions to maximize network up-time. QTS implements solutions that help customers grow their business, reduce costs or create competitive advantage.

## The Solution

QTS' QuikDesign™ for Office 2007 Design service offering provides you with a focused engagement to help you understand the new features and capabilities of the Office 2007 system, both for the Office client as well as the new Office Server components.

In this service offering, our consultants will take you through the new Office User Interface ("UI"), explaining why this has been done and how it will help you. We also review new features in the Office client (Word, Excel, PowerPoint, Outlook). We then review the new Office components including Microsoft Office SharePoint Server, Forms Server, Excel Server and Groove.

Within each module, we discuss with you opportunities within your organization where Office 2007 can help solve business problems or create new opportunities. So at the end of the session, you not only understand the product better, but can see the potential of how it can be applied in your environment.

The base QuikDesign session is one day. For clients who are familiar with Microsoft SharePoint Portal Server 2003, we offer a second day session that drills down much deeper on the new features in Microsoft Office SharePoint Server 2007. And our deliverable is a summary report outlining the solution components and possibilities in your environment.
