

QuikSecure™ Microsoft Platform Review Services

The Challenge

How secure is your network?
Are you confident you have all of the proper security settings and patches in place for your Microsoft servers?

Have you minimized the security exposure for your organization around Microsoft technologies? Would you know if a security incident had occurred? Do you know what to look for? Do you have processes for managing security?

QTS is a leading network integrator serving NJ/NY businesses for over 10 years, with strategic relationships with Microsoft, Cisco, Symantec, Check Point, Novell, Citrix, HP and other partners. QTS specializes in Security, Network Management and High Availability solutions to maximize network up-time. QTS implements solutions that help customers grow their business, reduce costs or create competitive advantage.

The Solution

QTS QuikSecure™ Microsoft Platform Review Services provide you with a comprehensive review of your Microsoft server environment, and knowledge transfer as to best practices around these products.

Under this offering, we review security configuration and settings, and transfer knowledge about best practices, for securing:

- Microsoft Windows NT, 2000 and 2003 Server;
- Microsoft Internet Information Server;
- Microsoft Exchange Server;
- Microsoft SQL Server.

We identify specific configuration and patch vulnerabilities within these products, as they relate to your environment. As part of the engagement, we also educate your IT team as to best practices, and show you how to more effectively manage your Microsoft network's security.

The engagement is one week long, and was developed in conjunction with Microsoft Consulting Services. QTS has leveraged Microsoft's best practices, but boiled the engagement down to a scope and cost suitable for Medium Business and Corporate customers with between 100-5000 desktop computers. Specific "mini-engagements" can also be delivered around each component of the offering.
