

The Challenge

Where to begin? Security threats abound on the Internet, internally, via dial-in. How do you determine where to start securing your network, and making sure the security you have is working properly?

QTS is a leading network integrator serving NJ/NY businesses for over 10 years, with strategic relationships with Microsoft, Cisco, Symantec, Check Point, Novell, HP and other partners. QTS specializes in Security, Network Management and High Availability solutions to maximize network up-time. QTS implements solutions that help customers grow their business, reduce costs or create competitive advantage.

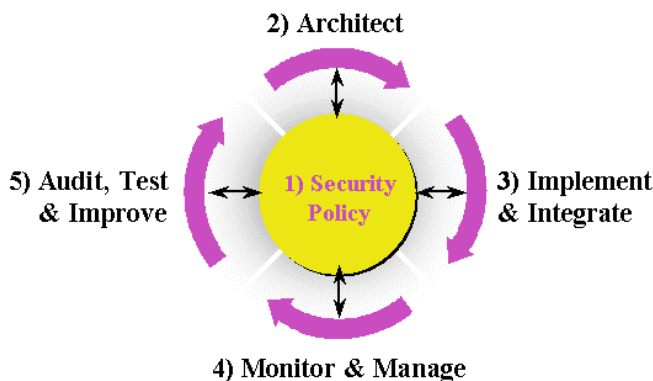

The Solution

QTS' **QuikSecure™** Program presents a complete approach to the lifecycle of implementing a network security system for mid-size businesses. Each stage can be a distinct engagement, done one at a time, to help build a case for ROI and business value, or the components can be done together in sequence. QTS' QuikSecure Lifecycle consists of:

- **QuikSecure Security Policy Development:** Using QTS-standardized templates as a starting point, we can work with your team to develop an organizational Security Policy to define acceptable use and protect your organization legally and at a business level;
- **QuikSecure Architecture Service:** We work with you to design a security architecture based on current and future business needs and technology;
- **QuikSecure Integration Services:** Based on the Security Policy and Security Architecture, we work with you to implement a network security solution, and provide training so you can manage the system on an ongoing basis;
- **QuikSecure Assisted Security Management Services:** From our Customer Support Center, QTS provides remote monitoring and management services for your Firewall/VPN, Intrusion Detection System, Web Servers and other security components, while you retain final control of the system (*unlike competitors' managed service offerings*);
- **QuikSecure Security Evaluation Services:** We conduct a high-level Security Assessment of your system, which can proceed to a Vulnerability Assessment using standardized scanning tools, and then to a Penetration & Attack Test (PAT) to assess the ability to break into your network.
- **QuikSecure Microsoft Platform Review Service:** Developed in conjunction with Microsoft, in this offering we work with you to review your Microsoft server and desktop platforms and apply security best practices;

For customers with security already in place, we can start with a Security Assessment, then move through the other stages as appropriate.

QTS' QuikSecure™ Security Lifecycle Methodology

QuikSecure™ Key Benefits

- Rapid Deployment of Security Infrastructure that meets your business needs, now and in the future
- Ability to leverage a full service solutions provider with strong security expertise, to partially or fully outsource security support
- Objective perspective on your network and security – strengths and vulnerabilities!
- Tailored to Medium Enterprise businesses
- Worry Free Networking!
