

QuikSecure™ Penetration & Attack Testing Services

The Challenge

Are you secure? Are you sure? Are you confident that your network is safe from hackers, crackers and hostile organizations? Would you know if your network had been compromised? Have you taken the necessary steps to audit and properly secure your company's network?

QTS is a leading network integrator serving NJ/NY businesses for over 10 years, with strategic relationships with Microsoft, Cisco, Symantec, Check Point, Novell, Citrix, HP and other partners. QTS specializes in Security, Network Management and High Availability solutions to maximize network up-time. QTS implements solutions that help customers grow their business, reduce costs or create competitive advantage.

Razorpoint Security Technologies offers comprehensive security services that help identify and correct potentially disastrous security vulnerabilities and help ensure the protection of network infrastructures and e-business ventures.

Rev 7-03

The Solution

QTS QuikSecure™ Penetration & Attack Testing ("PAT") service provides a strong test of the security of your network, based on controlled attempts to compromise your network security by expert "professional hackers."

Our PAT service is delivered by Razorpoint Security Technologies. Their approach leverages senior level talent to find the vulnerabilities in your network. There are three levels of service you can choose from:

- **Silver Level Attack/Penetration Test Service**, which includes up to 4 business days of testing for up to 90 networked devices on a subset of TCP/IP ports, and a detailed report of findings and recommendations;
- **Gold Level Attack/Penetration Test Service**, which includes up to 6 business days of testing for up to 125 devices on all TCP/IP ports, and a detailed report of findings and recommendations. This service also includes wireless access point identification;
- **Platinum Level Attack/Penetration Test Service**, which includes up to 15 business days of testing for up to 150 devices, including a detailed report of findings and recommendations. This service also includes wireless access point auditing, and SQL database testing.

A QuikSecure™ PAT is the final stage in a complete Security Evaluation.

QuikSecure™ Penetration & Attack Testing Services: Key Benefits

- Objective, detailed review of your network's security, using advanced techniques to attempt to compromise your network's security.
- Identify non-obvious vulnerabilities and repair them, before they are exploited by a malicious attacker.
- Review security from the perspective of a malicious attacker.
- Demonstrate present risks in your systems.
- Validate current security systems.
- Document action steps taken to improve security, for upper management.
- Illustrate present risks in your network.
- Worry-Free Networking!
